Simple System Requirements

❖ **Overview:** Build a simple dynamic system for any idea implemented by using **Tkinter** and **MySQL**

> **The system must satisfy the following requirements(you can add any extra requirements):**

1. Login and Registration Forms.

2. User's profile (display logged in user's data) and logout.

3. Apply CRUD(create, read, update, delete) operations.

4. Try using a lot of different database queries as possible.

5. Print a report's data (this data is already existed in the databases).

6. The database contains at least three tables.

7. Design a consistent UI.

8. The system contains at least four pages.
